Professional Summary

Senior Software Engineer with 10+ years of experience designing, building, and delivering modern web applications from concept to production. Experienced in React, TypeScript, Node.js, cloud based deployments, and modern software delivery practices. Proven success collaborating with cross functional teams to build scalable applications, improve engineering processes, and deliver high-quality software in Agile environments

Work Experience

Senior Software Engineer I *DeployCraft, Remote*

May 2024 – Present

- Led the frontend architecture for a large-scale React and TypeScript application, establishing reusable component patterns, feature-based project organization, and shared design system standards.
- Implemented a reusable component library that reduced duplicate UI code and accelerated feature development across multiple engineering teams.
- Migrated several legacy JavaScript applications to modern React and TypeScript, improving maintainability and reducing production defects.
- Built a data api layers that simplified frontend state management and reduced unnecessary network requests.
- Improved Core Web Vitals through code splitting, lazy loading, bundle optimization, image optimization, and reducing page load times by more than 30%.
- Integrated secure authentication using OAuth 2.0 and JWT with role-based authorization across the application.
- Developed full-stack features using React, TypeScript, Node.js, and Express in a collaborative Agile environment.
- Designed and implemented REST APIs supporting customer management, reporting, and operational workflows.
- Built responsive frontend applications that integrated with backend services to provide real-time business data.
- Collaborated with platform engineers to containerize applications using Docker and support cloud-based deployments.
- Assisted with maintaining CI/CD pipelines using GitHub Actions to automate builds, testing, and deployments.

Senior Frontend Engineer I *Wurl, Remote*

December 2022 – December 2024

- Led frontend development for internal tooling platforms, owning UI architecture decisions and implementing custom ESLint rules and Babel plugins to improve long-term maintainability and scalability
- Played a key role in transitioning the product from MVP to a stable V1 release by enhancing performance, implementing modular components, and reducing technical debt
- Rebuilt UI flows for a high traffic scheduling product, resulting in improved UX, reduced customer friction, and increased internal usability
- Leveraged AWS Lambda with CloudWatch to power scheduling workflows, automating task execution and real-time notifications, which improved reliability and reduced frontend complexity.
- Supported triage and resolution of technical support tickets while owning deployments from development through staging to production
- Participated in full-cycle DevOps process and configured build/deploy workflows to streamline QA and release cycles
- Actively involved in recruiting and mentoring engineers; led technical onboarding, pair programming, and using Confluence for documentation and Jira to track onboarding workflows and progress
- Collaborated closely with product, design, and backend teams to define roadmap features and ensure cross-functional alignment

Senior Software Engineer I *Verys, Remote*

December 2020 – December 2022

- Led the development of high-fidelity UI components and a reusable design system using React, TypeScript, Ionic, and StoryBook, leveraging Hooks and the Context API to standardize state management across enterprise-grade projects (e.g., Upwise, a MetLife-backed fintech platform).
- Championed and enforced frontend testing practices with Jest and React Testing Library, establishing testing standards, improving coverage, and raising overall code confidence.
- Influenced architectural decisions around component modularity, performance optimization.
- Directed collaboration with backend teams to design and integrate RESTful APIs with Node.js and Express, enabling real-time updates and ensuring seamless frontend-backend alignment.
- Architected and integrated AWS services (S3, Lambda, CloudFront) to support scalable asset delivery and serverless workflows, reducing infrastructure overhead and improving performance.

Clifford Harvey

(310) 346-3713 | cliffharvey06@gmail.com | Las Vegas, NV

<https://www.linkedin.com/in/clifford-harvey/>

- Successfully transitioned ownership of a core frontend project by running knowledge-transfer sessions, and supporting the receiving team through the handoff, ensuring continuity and long-term maintainability.

Software Engineer / *ChiroTouch, Hybrid Las Vegas*

December 2018 – December 2020

- Rebuilt legacy systems using LitElement for web components, focusing on reusability and improved performance
- Implemented Redux with service-oriented architecture to simplify state management and modularize application logic
- Led unit and integration testing strategies using Mocha, streamlining QA processes and reducing bugs across releases
- Created backend services using Node.js and Swagger documentation to manage and validate user data
- Supported transition to micro-services architecture by designing and deploying new services in a scalable Node/SQL stack
- Actively collaborated in cross-functional squads, including design, QA, and support to align functionality and release timing

Software Engineer / *United Power, Remote*

April 2018 – November 2018

- Built end-to-end React/Redux applications for energy management tools, implementing robust authentication and routing logic
- Developed backend APIs with Express and NoSQL databases for data persistence and reporting dashboards
- Wrote unit tests with Jest and integrated async workflows using Redux-Saga to manage API call sequencing and side effects
- Ensured SPA performance optimization by implementing lazy-loading strategies and modular routing

Software Engineer / *Taffy Media, Remote*

March 2017 – April 2018

- Built mobile-first web components using React Native and integrated with GraphQL via Apollo for live database interactions
- Led debugging and performance tuning efforts to stabilize real-time messaging features powered by WebSockets
- Developed and tested modular code with Jasmine, increasing test coverage and reducing regression incidents across the app lifecycle

Software Engineer / *GRAPHQL Discovery, Los Angeles*

2015 – 2017

- Engineered GraphQL schema visualizations by building recursive parsing tools that transformed introspection queries into dynamic SVG diagrams
- Created hot-reloading UI visualizers that allowed real-time updates to schema changes via React and Redux containers
- Built a custom Express-GraphQL server with dynamic endpoint management to support a wide range of internal and external API consumers
- Led front-end state management refactors to increase modularity and improve performance for large-scale, data-rich dashboards

Technical Skills

- **Frontend:** React, Redux, JavaScript, TypeScript, Next.js, HTML, CSS, Material UI, Tailwind
- **Backends:** Node.js, Express, REST APIs, GraphQL
- **Cloud:** AWS services, Docker, Github Actions, CI/CD
- **Databases:** PostgreSQL, MongoDB
- **Testing:** Jest, React Testing Library, Supertest, Jasmine, Mocha TDD, BDD
- **Engineering:** System Design, Software Architecture, Performance Optimization, Accessibility, Agile, Scrum

Education

El Camino College

CodeSmiths – Open-Source Residency, JavaScript/React/Node Mentorship
